Agenda

- About the use case
- Introduction Microsoft Dataverse
- Microsoft Dataverse vs SharePoint
- Data types
- Out-of-the-box functionality
- Custom controls (PCF)
- Demo of results
- Conclusion
- Q&A

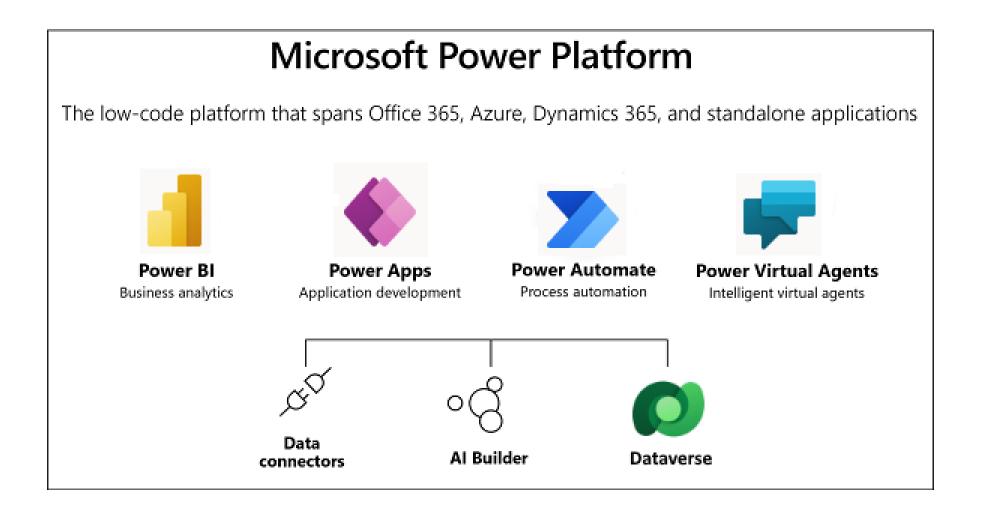

About the use case

- SharePoint list for site requests (site provisioning)
- Add new items, edit items to update site
- Move input to Dynamics 365 (CRM) = Dataverse + PA flow
- Recreate the SharePoint UX in Dataverse

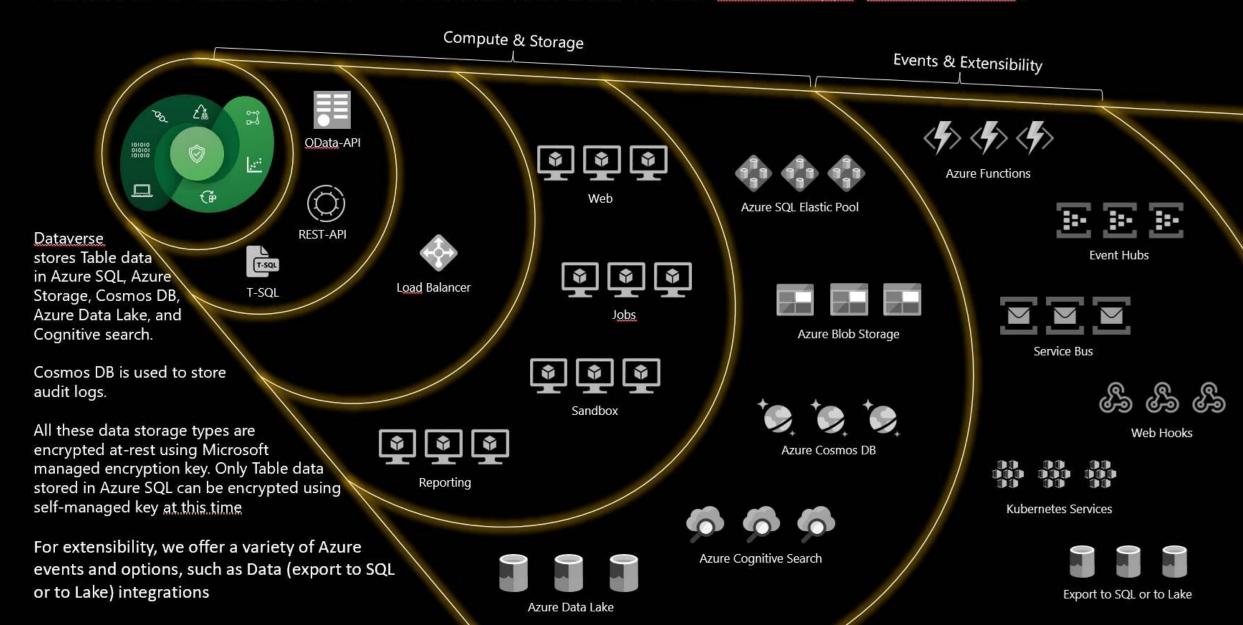

Introduction Microsoft Dataverse

Power Platform – Dataverse Security + Compliance **Encryption at Rest Encryption in Transit** Customer Managed Environment Encryption Key Environment Lifecycle Integration • Admin + User Roles Unlimited environments Power Automate or Logic Apps **Business Units (Unlimited)** Maximum Size 4TB or more Dataflows, Azure Synapse **Hierarchical Security** Reset, Copy, Backup API Access & T-SQL Endpoint Field Level Security Point-in-time Restore Events to Event Hub Data . Sharing Disaster Recovery Relational, File + Image Events to Service Bus **Activity Logging** Find, Filter, Sort Export to Lake Auditing Basis + Advanced Data Types Data Export Service Business Rules and Workflows Activities / Activity Feeds Plug Ins **Business Rules** Common Data Model Server-Side Sync **之** Classic Workflows **Custom Tables** Web Hooks O→♦ **Power Automate** Virtual Tables (CRUD) Mobile Offline Non-Relational (Log) Advanced + Dataverse Search Reporting **Virtual Tables** Paginated Reports (SSRS) 4TB or more 101010 Power BI Dashboards **:::** 010101 101010 Managed Data Lake Clients • Web Mobile (Power Apps / D365 Player) App Lifecycle Desktop **Unmanaged solutions** The second second Microsoft Outlook Managed solutions Microsoft Excel Azure DevOps Power Platform Tools Microsoft Teams

Power Platform – Dataverse: But what's behind?

Microsoft Dataverse

Securely store and mange business data

Event to Service Bus

Catalog and discovery

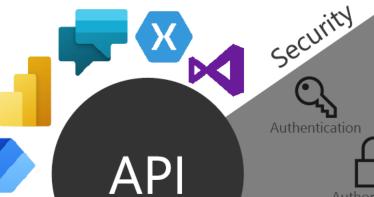

Files and blobs

Log files

Event to webhook

Calculated & Rollup fields

Authorization

Auditing

Logic

Jobs

Workflows

Data

Reporting

Model

Data lake

Semi-structured

data

Export to Lake

Export to SQL

Microsoft Dataverse vs SharePoint

- (Common) Data Model: tables, columns, relationships, field mappings, choices
- Model-driven apps: apps driven by data model, metadata
- Relational database; one database per environment
- Security model based on ownership vs storage location

SharePoint (SP)	Dataverse (DV)
List	Table
Column	Column
View	View
Form	Form
Content Type	Form

Dataverse Forms as Content Types

SP

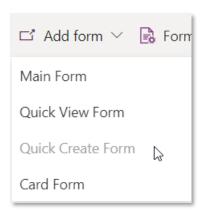

Content type: set of columns, and Column Settings (UI, PS) that makes the form

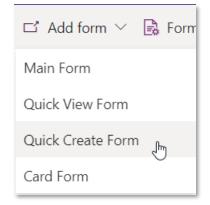

DV

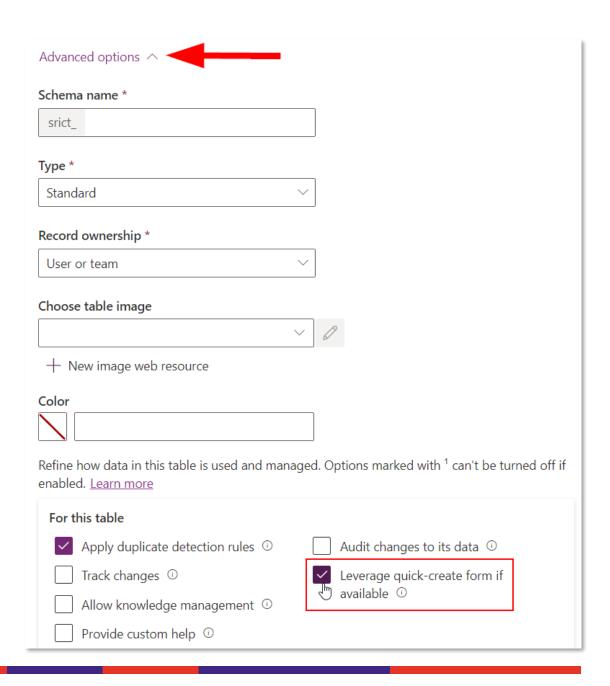

- Make the form with set of columns, and business rules
- Multiple forms: access via security role(s), switch in UI
- Use case
 - → New item: Quick Create Form
 - → Display item: Read-only form (Request)
 - → Edit item: Editable form (Update)

Dataverse Forms

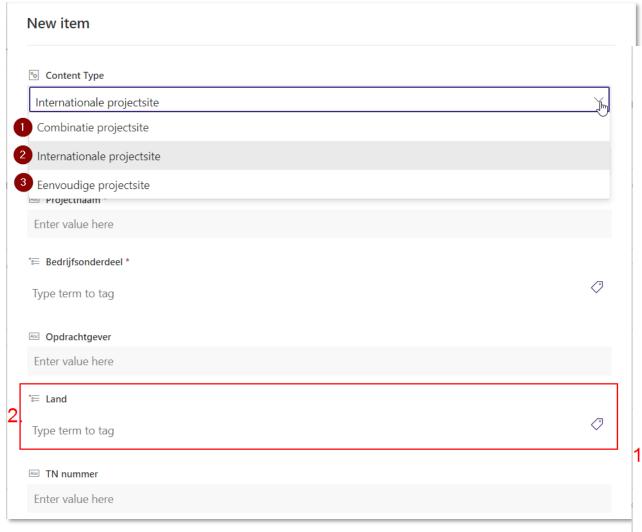

Quick Create Form not enabled by default

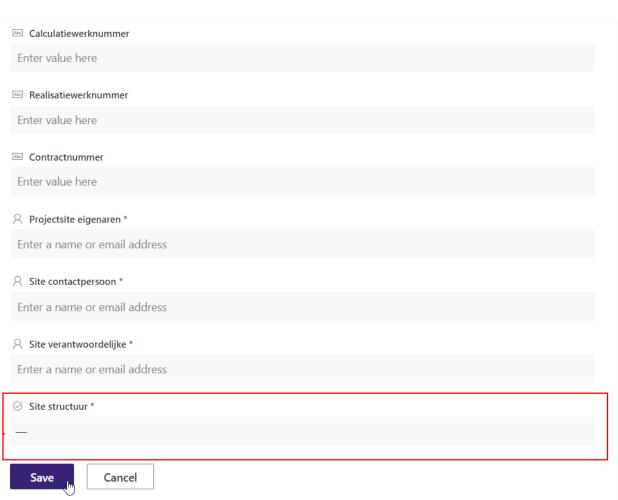

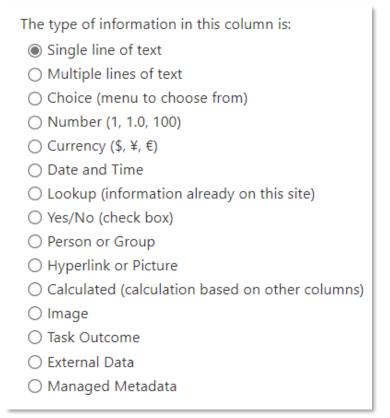

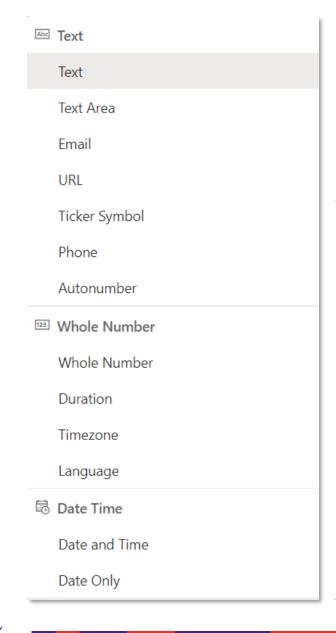

SP: New item

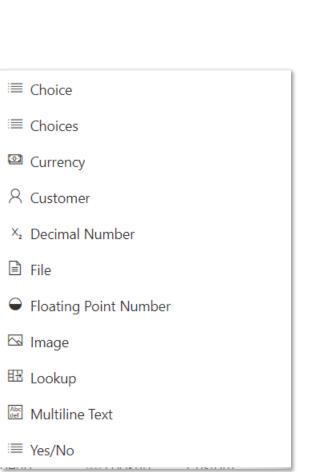

Data types SP vs DV

Data types use case

DV ⇒ SP (PA flow)

- Single line of text
- Yes/No
- Choice
- Person or Group
- Managed Metadata
- "Content Type"

$SP \Rightarrow DV (PA flow)$

- Choice
- Hyperlink or Picture
- Integer (ID)

Column (click to edit) Type Multiple lines of text Aangevraagde bibliotheken Managed Metadata Bedrijfsonderdeel Bovenstaande variabelen updaten? Yes/No Calculatiewerknummer Single line of text Contractnummer Single line of text Date and Time Created Single line of text Initial Content type Initial Content type Id Single line of text Managed Metadata Land Modified Date and Time Nieuwe bibliotheek Single line of text Opdrachtgever Single line of text Single line of text Projectcode Projectcode Sanitized Single line of text Single line of text Projectnaam Projectnaam Sanitized Single line of text Projectsite eigenaren Person or Group Single line of text Realisatiewerknummer Request ID Single line of text Single line of text Request ID 2 Multiple lines of text Site approval comment Person or Group Site contactpersoon Site status Choice Site structuur Choice Site structuur overgang Choice Hyperlink or Picture Site url Site verantwoordelijke Person or Group Title Single line of text Single line of text TN nummer

Data type: Single line of text

SP

Max length: 255

DV

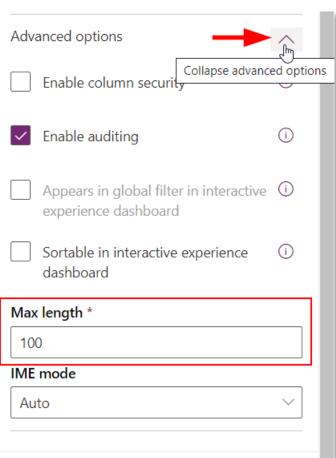

Default length: 100

Max length: 4.000

No default value (use business rule)

PA flow

 Limit string length to max 255 with expression: substring(triggerBody()['text'],0,if(greater(length(triggerBody()['text']),255),255,length(triggerBody()['text'])))

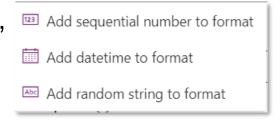

Data type: Text > Autonumber

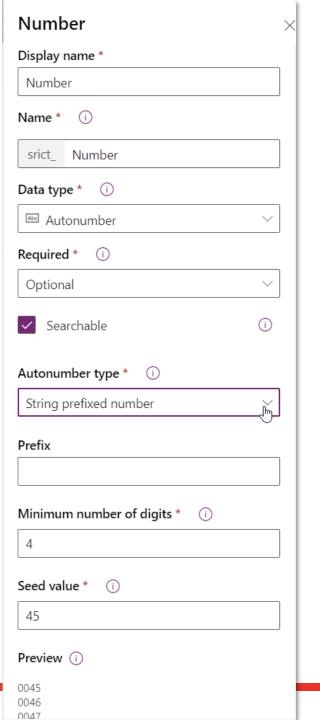

SP Projectcode *

Single line of text: manual input based on serial number

DV

- Autonumber: calculated on create
- Autonumber type:
 - → String prefixed number
 - → Date prefixed number
 - → Custom: string constants,
- Set seed value

Data type: Choice

SP

- Value (string) / Id (integer)
- Id based on order of choices

DV

- Value (integer) / Name (string)
- Value based on Publisher Option Value Prefix + index number

PA flow

- Use DV Name to set Choice value in SP
- Use SP Id in expression to set Choice value in DV

```
"SRSiteStatus": {
    "@odata.type": "#Microsoft
    "Id": 0,
    "Value": "In afwachting"
    },
    "SRSiteStatus#Id": 0,
```

```
body

"srict_sitetype": 476010000,

"_srict_sitetype_label": "Combinatie projectsite",

"srict_sitestructure": 476010000,

"_srict_sitestructure_label": "Pretender",
```

```
"item/SRSiteStructuur/Value": "Pretender",
"item/SRSiteStructuurovergang/Value": "Niet geselecteerd",
```

```
"entityName": "srict_siterequests",
"recordId": "5d5dd608-3975-ec11-8943-000d3add6016",
"item/srict_sitestatus": 476010004,
"item/srict_siteurl": "https://strukton.sharepoint.c
```

Data type: Person or Group

Depending on the use

DV:

- Owner (system column): User or Team ("Assigned To")
- Lookup to User
- Lookup to Team (use case)
- Multi-table lookup
- NO multiselect in lookup column, only via N:N relationship (after create!)

PA flow

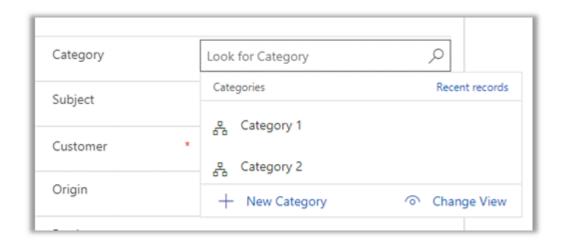

Get team members and convert to claims to set value in SP

Data type: Managed Metadata

Depending on the use / subject / taxonomy

DV:

- Hierarchy is OOB
- Business Units / Teams
- Territories (use case: company)
- Lookup to standard / custom table
- Categories; Subject Tree
- Choice(s): single (use case: country), multiselect
- Multiselect via N:N relationship (#tags)

Mapping Dataverse values to SharePoint values

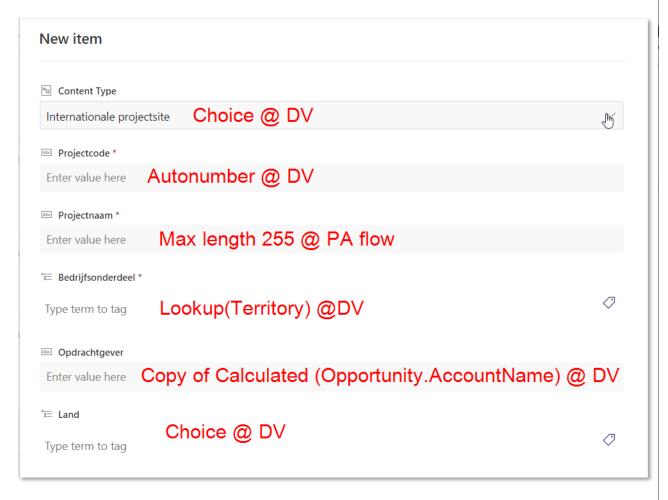

Ways of getting / mapping the values

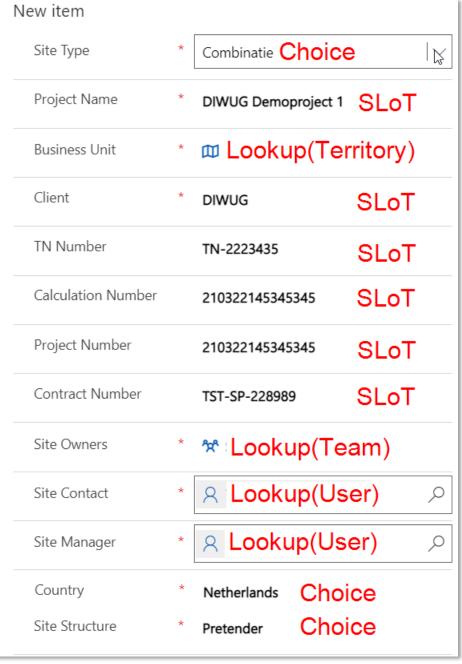

- 1. Store SP value with the row/record of the DV value
- 2. Use a mapping table to map SP and DV values
- 3. Use a lookup to a custom table with SP values
- 4. Use environment variables
- 5. Get value from SP with PA flow (instant)
- 6. Convert DV value to SP value/format with PA flow

PA flow

Mapping in use case: 1, 2, 5, 6

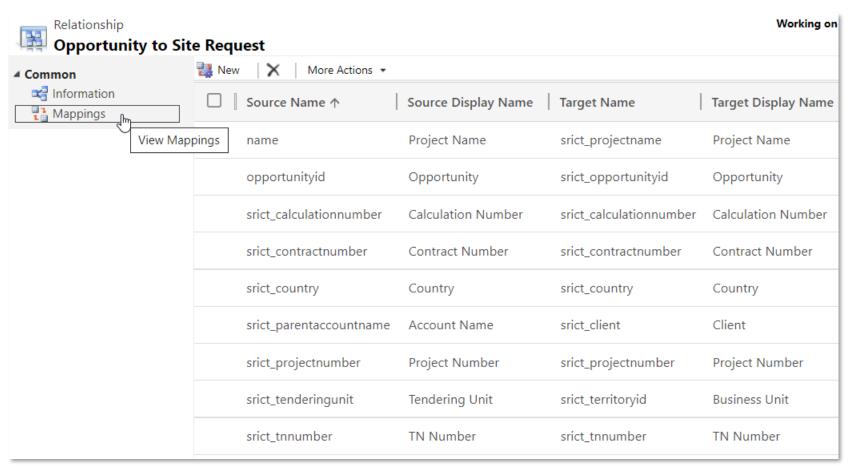

DV: New item

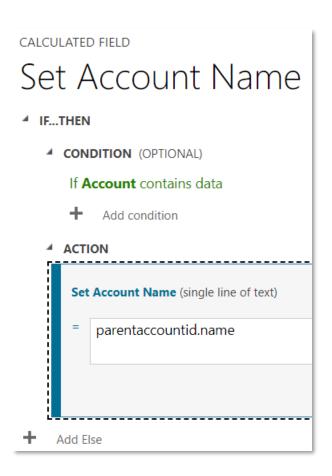

OOB: Field mapping

- Map attributes between related tables to set default values for a row that is created from parent
- Same type and format
- See <u>Docs</u> for specifics

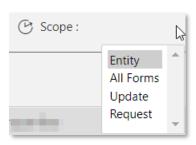

OOB: Calculated column

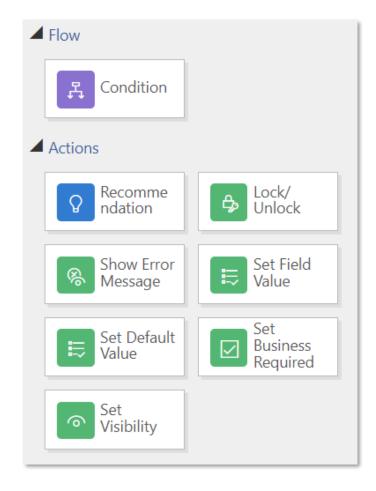

- Use columns from the current table or related parent tables from a many-to-one relationship
- Calculated fields are read-only
- Data types that support calculations: Text, Choice, Yes/No, Whole Number, Decimal Number, Currency, Date Time
- See <u>Docs</u> for specifics
- Future: Formula column based on Power Fx
- Use case
 - → No field mapping of Lookup to Text
 - → Calculated column (Text) @ Opportunity
 - → Mapping Text > Text

OOB: Business Rules

- Conditions & Actions (columns on form)
- Client side (javascript)
- Server side (UI, API, import)
- Validation (like in SP)
- Scope: Entity, All Forms, one of the forms
- All Forms scope includes Quick Create Form
- Use case
 - → Set default value (Entity scope)
 - → Hide/show columns in forms
 - → Set column (not) required, clear field
 - → (Un)lock Update field

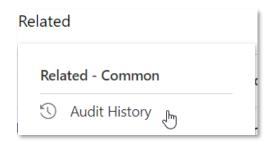

OOB: Auditing

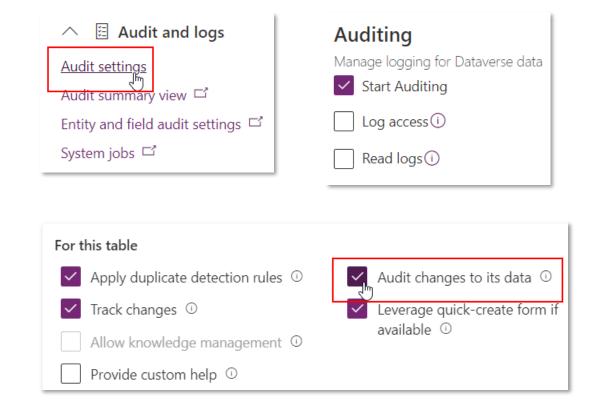

SP

Version history

DV

- Audit History
 - → Start Auditing in environment settings
 - → Enable Auditing in table settings
 - → Form: Related tab > Audit History

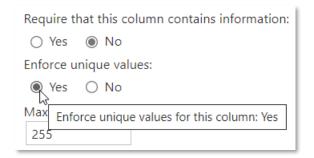

OOB: Unique values

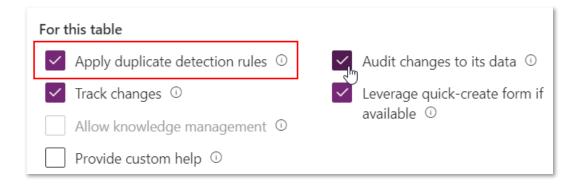

SP

Setting in list column

DV

- Duplicate detection
 - → Check for matching values
- Alternate keys
 - → Enforce unique rows

Column formatting in views

JavaScript web resource, graphics web resource

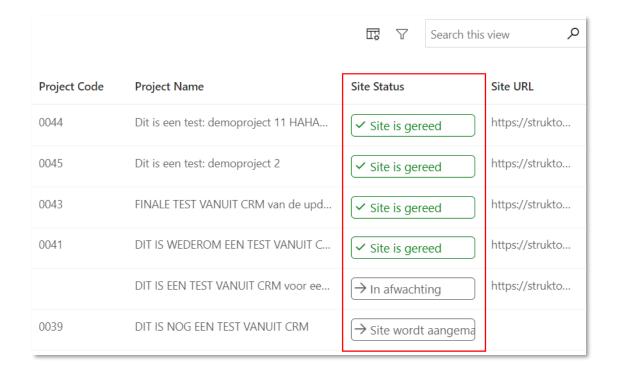

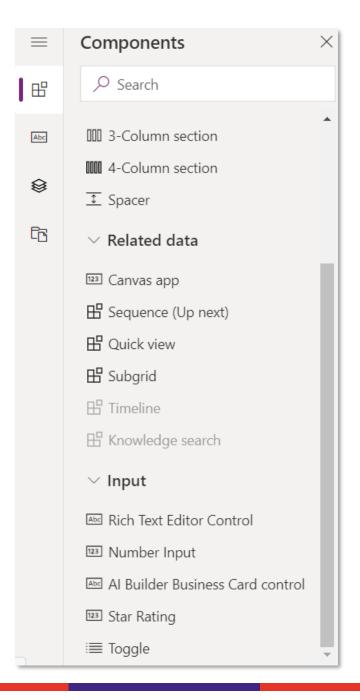

Custom control (PCF)

PCF

- Power Apps Component Framework
- Custom controls by Microsoft
- Custom controls by the community

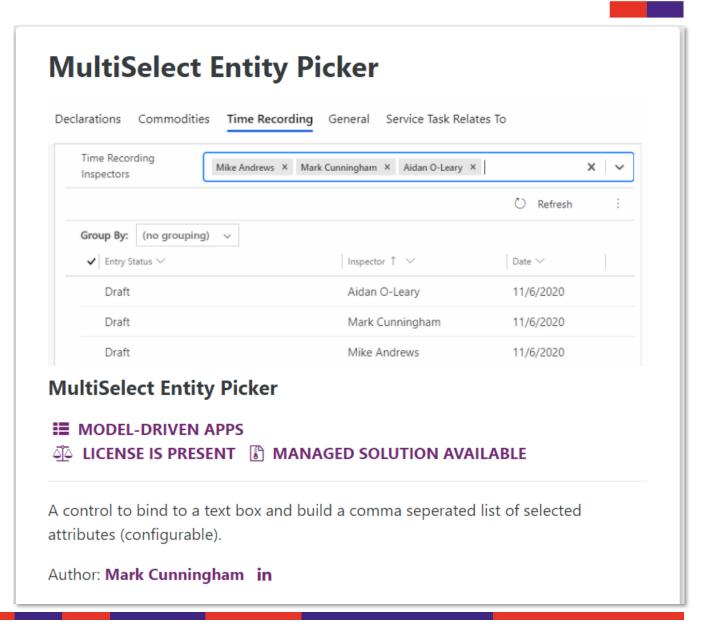

PCF Gallery

PCF solution for multiselect people picker (Person or Group column)

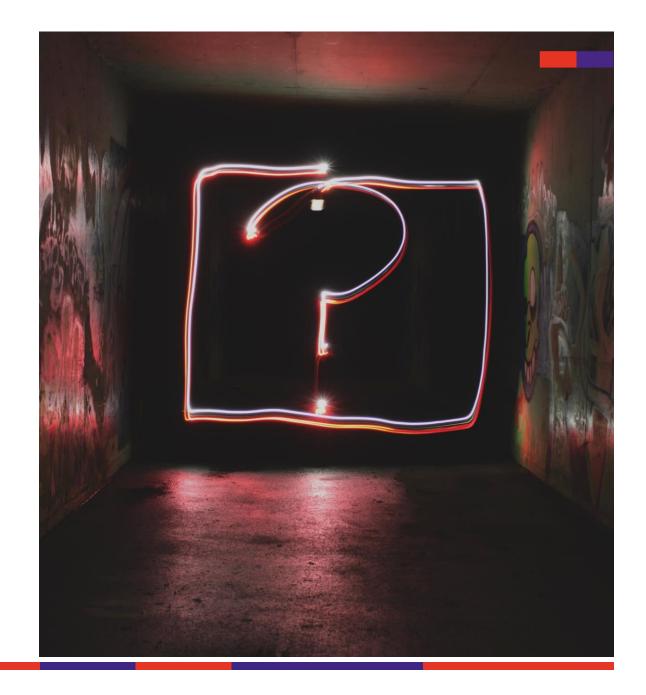

Demo
